

Surprise, Surprise! The Cableopoly is Opposing Spectrum Access (Again)

The Cableopoly is at it again.

Every single time a spectrum band comes into play, the cable industry shows up with the same strategy: block wireless from getting the spectrum it needs to compete at all costs.

For all that talk cable does about sharing, they sure do want to monopolize spectrum access. If the goal is affordable service, it is time to stop listening to the Cableopoly's constant demands to thwart competition.

6 GHz
First, cable said all 1,200 megahertz of 6 GHz was completely off limits to wireless.

CBRS
Then, cable said we can't modernize CBRS in a way that actually lets consumers benefit from the spectrum.

Lower 3 GHz
Last year, cable told everyone it was too dangerous to make the lower 3 GHz work for 5G wireless.

7 GHz
Now, as the Trump Administration is exploring opportunities in 7 GHz, of course, cable's response is 'no, Mr. President, that's ours, too.'
